Find your place.

A quieter Dock. A clearer workspace.
A nautical mark, built for macOS.

SAILIDENTITY

PORTSIDE / APP ICON

A sail. A P. A destination.

A single emblem composed from three precise, purposeful shapes.

01 — Forward sail

A clean triangular plane establishes direction and momentum.

02 — Rounded sail

The curved form quietly suggests the bowl of the letter P.

03 — Safety-orange hull

One vivid accent grounds the vessel without unnecessary ornament.

One icon. Three appearances.

Designed for light desktops, dark desktops, and high-visibility accents.

Harbor / Default

Sailcloth / Light

Bright surfaces and marketing

Signal / Accent

Campaign and promotional use

Quiet at every size.

The core form holds its identity without ropes, waves, borders, or texture.

SIZE STUDY / ACTUAL GEOMETRY

1024 PX

256 PX

64 PX

32 PX

16 PX

A controlled palette.

Three primary colors. Tone-on-tone depth only where it serves clarity.

Harbor Navy

#10283F / Foundation

Sailcloth

#F4EEDF / Primary mark

Safety Orange

#F06A42 / Accent

Portside

INTER DISPLAY SEMIBOLD

Inter / SF Pro for product UI · Strong hierarchy, modest tracking

Built to be unmistakable.

The symbol can stand alone, or lock up with a humanist geometric wordmark.

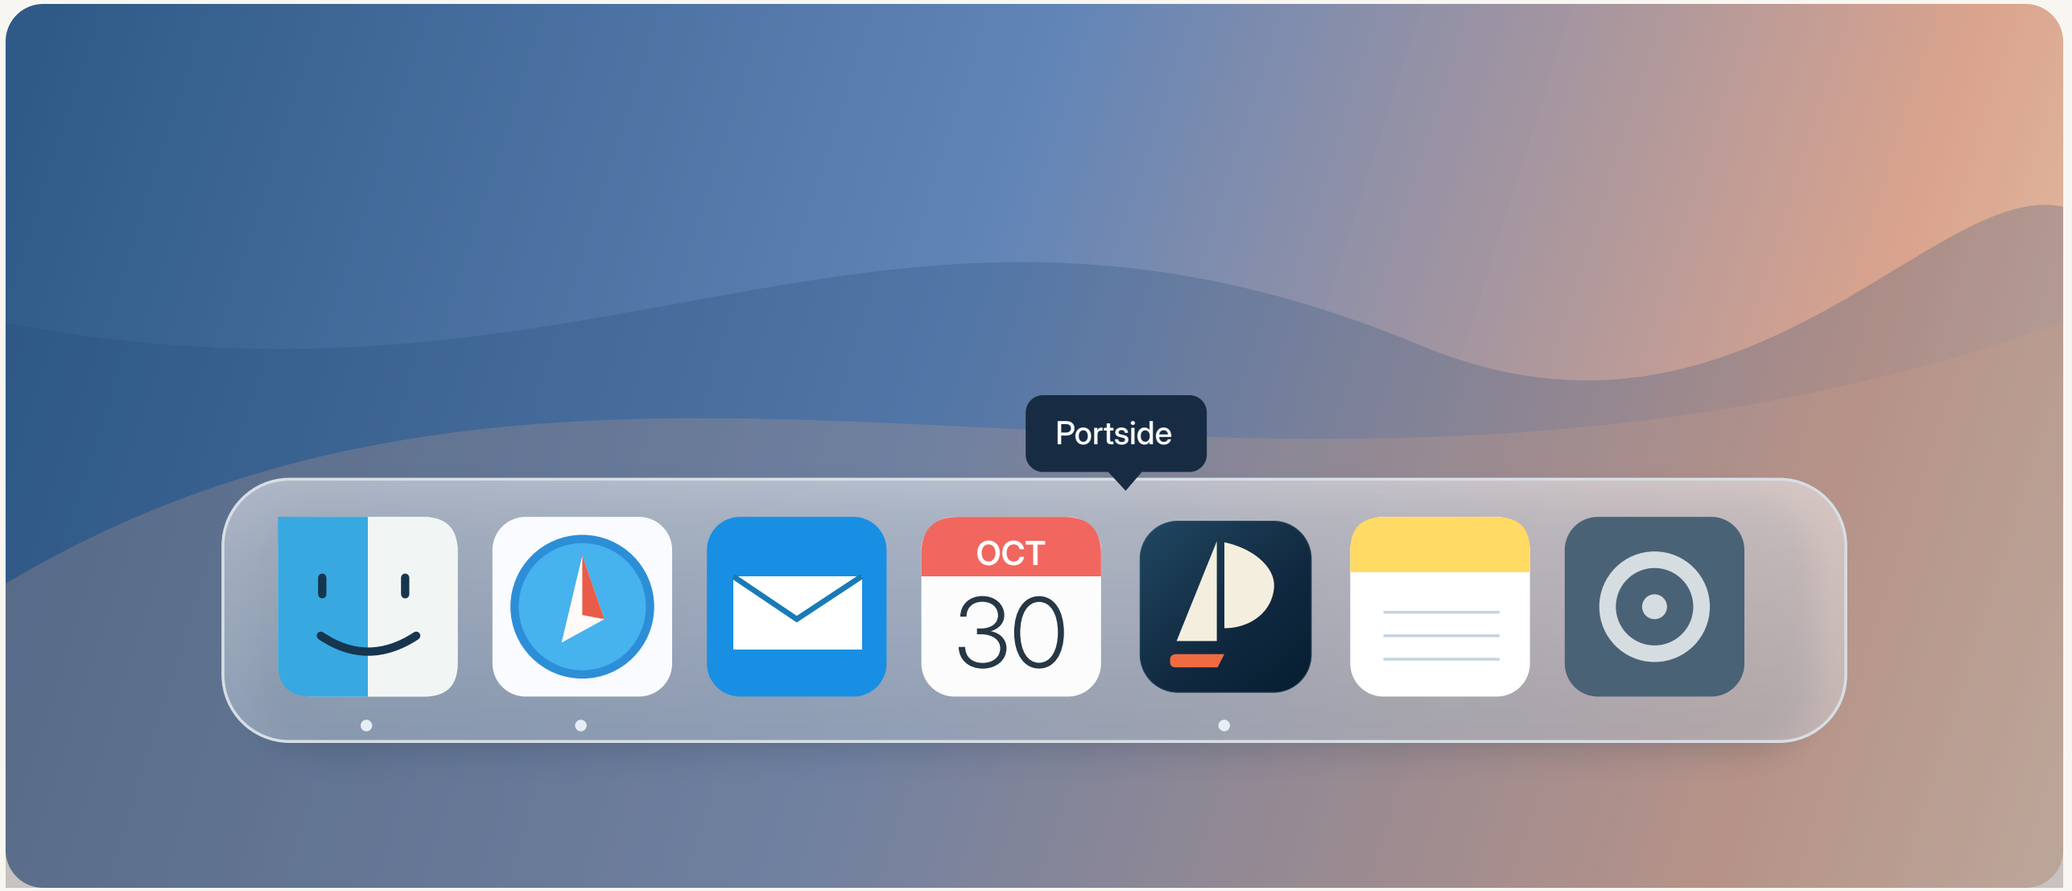

A natural resident of the Dock.

Its value is in the silhouette; no supporting illustration is needed.

Feels native, not themed.

The nautical motif lives in the identity, not in every interface control.

About

Dock Appearance

Make your Dock feel like yours.

STYLE

Harbor

Sailcloth

Signal

A calm interface, with one decisive accent.

Ready for an Xcode project.

Scalable sources, multi-size raster exports, and a layered Icon Composer bundle.

Master assets

Editable SVG shapes with separate sail + hull paths

PNG exports at 16 / 32 / 48 / 64 / 128 / 256 / 512 / 1024

Dark, light, and accent icon variants

Horizontal and stacked wordmarks

Monochrome status bar icons

Native .icns fallback

Icon Composer

AppIcon.icon

Layered file-system package:

icon.json + three editable SVG assets

Navy background is handled by Icon Composer

No mask baked into the source layers

Mac validation still required in Icon Composer
